Are you ready for your next BIG ADVENTURE?

Whether it's a business trip or a much-needed vacation, **don't forget to pack your cybersecurity essentials!**

1

First things first, **backup** all of your important data before you go. Because let's face it, **losing your device while traveling is the worst and can put a damper on any trip.**

2

Next up, turn on **Find My Device** so you can locate it if it gets lost or stolen. You can even leave a funny message for whoever finds it, like **"If found, please return to my mom."**

3

When connecting to Wi-Fi outside of your home network, be sure to use a mobile **firewall** and avoid using public Wi-Fi if possible (**unless you want hackers to join in on your online shopping spree**).

4

And remember: **just because you're on vacation doesn't mean cybercriminals are taking time off too.**
So keep those devices **protected** with updated anti-malware solutions and always use **strong passwords.**

5

Last but not least, **try not to overshare on social media about where you are and how long you'll be gone**. Burglars might see that as an invitation to come visitwhile you're away!

So go ahead and enjoy that well-deserved break – just make sure to bring along some extra cybersecurity measures in case any unwanted guests try crashing the party!
